Today's moderators

Keyzom Massally

Head of UNDPs DPG Team

Ben Bertelsen

Digital Analyst

What are Digital Public Goods?

“Open-source software, open data, open AI models, open standards and open content that adhere to privacy and other applicable laws and best practices, do no harm, and help attain the Sustainable Development Goals.”

Examples of Digital Public Goods

Mifos.

OpenLMIS

OPENS RP

MEDIC MOBILE™

UNDP products implemented in multiple settings in process to be accredited as DPGs, and become widely available

UN Biodiversity Lab

Access to spatial data for of environment and conservation policies

30k views of platform since recent re-launch, and 5 online events with **+10k attendees**

ekShop

Platform for small and microbusinesses to sell as e-commerce

56k users (merchants)

NiSE

Educational platform providing virtual learning environments

5k users (students and teachers)

Ajeevika

Market platform for rural women to sell and gain new skills

Pilot with 10 self-help groups and **+50 merchants**

iVerify

Election anti mis-/disinformation monitoring tool

Piloted in **2 elections and 1 more planned** with NGO partners

Benefits of DPGs on speed of implementation, support and costs

Lucy Harris

Co-lead

Digital Public Goods Alliance

Fast-tracks implementation and lowers risk by replicating and amending, rather than building from scratch.

Supports governments digital maturity by making them owners of the source-code - and removes reliance on vendors and lock-in.

Comes with a community of contextual knowledge, people who have supported implementations, expansive technical docs, guides, etc.

Requires funds to implement but reduces overall lifetime it costs because DPGs are free to and does not come with licensing fees.

5 minutes on UNDPs approach to sustainability when working with Digital Public Goods

sustainability
/səˈstānəˈbɪlədē/
noun

the ability to be maintained at a certain rate or level.

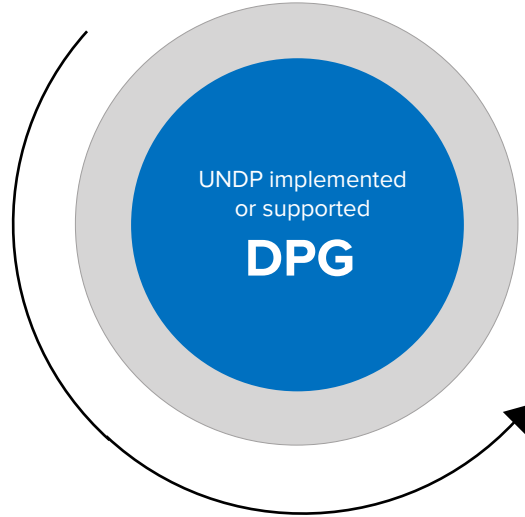

UNDP takes a holistic approach to what makes Digital Public Goods "sustainable" – *Creation, Maintenance and Adoption*. This includes considering DPGs in terms of:

Monitoring and
evaluation of
outcomes

Funding through
revenue or grants

An organizational
home for the
DPG and its team

Community
management

Technical
maintenance and
support

Continued digital
product development

As digital products become increasingly embedded into public services and development programming, dependencies on those products rise, which demands long-term sustainability

UNDP's Whole-of-Society approach

UNDP's work to implement Digital Public Goods

- Follows our Principles for Digital Inclusion
- Seeks to amplify development outcomes across all UNDP programming
- Support open standards and integrations with other digital services

Creating UNDP unlocks greater value for money through helping Governments and UNDP-funded digital solutions to become DPGs in the DPGA Global Registry

Maintenance UNDP collaborates with DPG communities to provide feedback of usability from countries and catalyzes creative and new partnerships for DPG sustainability and impact

Adoption UNDP through our technical assistance supports greater adoption of DPGs while also assessing usability of DPGs during implementation to ensure broader sustainability of DPGs

Roundtable

Assane Gueye, Ph.d.

**Co-director of
the Upanzi Network
and CyLab Africa**

Carnegie Mellon
University Africa

**Carnegie
Mellon
University
Africa**

The Upanzi Network and CyLab Africa supports solutions co-designing, technology transfer, cyber security, privacy, capacity building and lab resources. While connecting with CMU Africa's +250 student body.

Robert MacTavish
Child Protection Specialist
/ **Project Lead**
Unicef, Primero

Primero™ supports child protection workers and social workers in humanitarian and development contexts to manage data on vulnerable children and survivors of violence.

Currently used in more than 40 countries and territories, and more than 130 software developers are contributing (via Github).

Ed Cable
President & CEO
Mifos

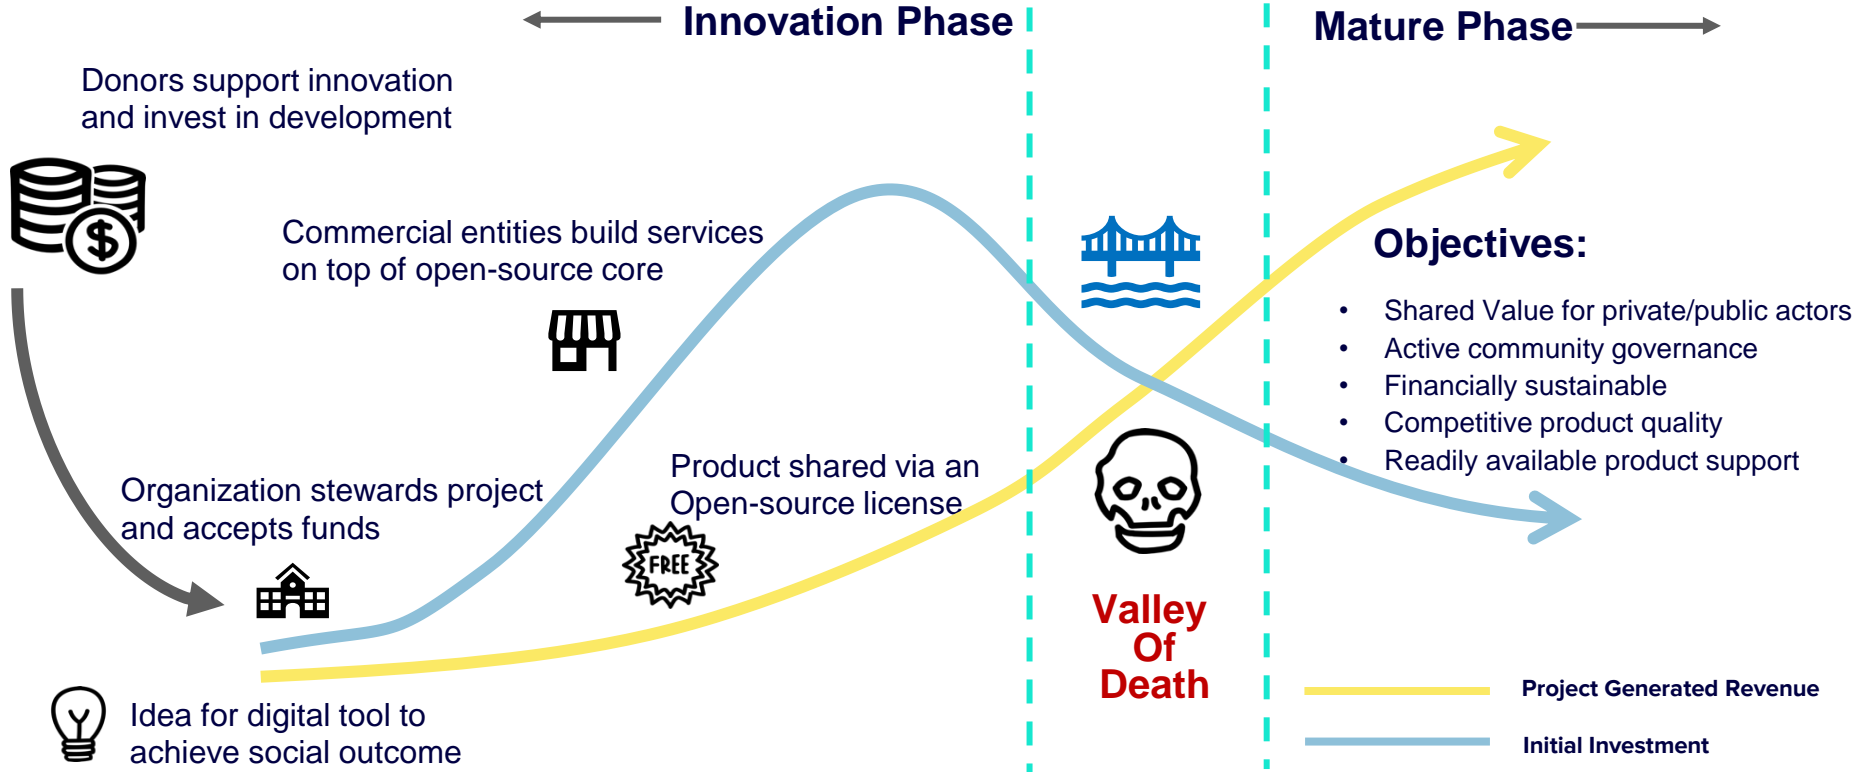

Mifos is a modern, cost-effective connected composable banking infrastructure to:

- Advance financial health of 3B underbanked.
- Commoditize core banking software.
- Unlock virtuous cycle of upstream contribution & shared innovation.
- Enable global ecosystem of market-driven solutions & services.

20,000,000 clients reached by 500+ institutions across 56 countries powered by our open APIs.

Finding a home for sustaining a DPG

Organizational pathways for DPG Sustainability

"Digital public goods can help countries move from observers to drivers of their digital transformation.

However, to do this we must move beyond only supporting technology implementations, and supplement with new types of funding assistance directed at stimulating the local vendor ecosystem and supporting academic institutions to become local hubs of expertise and capacity."

Liv Marte Nordhaug, Co-lead, DPGA (2021)
