HOW TO USE THIS TEMPLATE

Please cite your sources and provide clear evidence or explanations when providing impact numbers or data.

This is a helpful tool with sample questions. You don't need to use this template. Edit and make it your own.

Please send us questions or feedback on how to improve this for everyone.

digital.support@undp.org

Be honest and trustworthy with your answers. No need to exaggerate impact or progress.

Problem Scope

- **What is the problem?**
 - What is the size and reach of the problem?
(optional: provide info graphics/ graphs) What evidence, sources of information or research do you have to support this?
- **Impact**
 - Who is impacted? Do you have measurements of the impact of the problem on a specific population?
- **AI**
 - What is the impact of AI on the problem and impacted population? What early evidence do you have of this?

Problem Size

Population Impact

Where is your area of focus? Out of the total population impacted, what part of the population are you focused on helping with the problem you defined?

What population will your strategy impact in a year?

Total Population Impact

**\$ 1 Billion People/
\$ 1.4 Billion**

This can be measured in total population impacted by the problem, monetary risk/ loss or other measures of impact.

Accessible Population Impact

500,000 children

Out of the total impacted population, what part of it does your approach/ solution reasonably impact?

Serviceable Obtainable Impact

**150,000 children
\$ 167 Million**

This is a smaller fraction of the above that is the target of a serviceable and realistically achievable population in the short to medium term (1-2 years)
Please provide your approach to calculate this.

Landscape & Culture

Describe the regional ecosystem. What are the cultural elements or systems that make these problems challenging to solve for? What does someone who doesn't know your culture or region need to understand better in order to understand the logic of your approach?

The Societal
Conditions

What makes this a recurring problem? What impairs the ability to prevent this problem?

Regional/ Cultural
Nuances

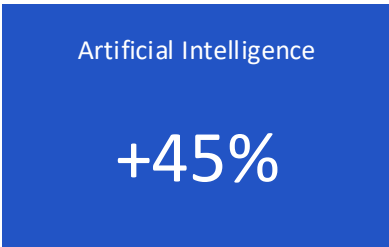

What do we need to know about local culture that makes the problems uniquely challenging?

Systemic Challenges

What local systemic challenges are you working within? What systems offer opportunities? What systems do you think need to be dismantled and rebuilt?

Impact of AI

How does AI impact your problem or strategy?

Increase in use of AI in your region

Number of escalations due to AI use

Explain your data and

Your Strategy

What is your strategic approach? What evidence do you have that this can be effective?

Proactive

How does your strategy anticipate and mitigate the risk/ harm?

Local Enablement

How does this improve the AI ecosystem or help with local enablement?

Innovative

How is your approach innovative?

Collaborative

How does your strategy enable shared private/ public sector responsibility? Who are you partnering with?

Strategy Validation

What research or testing have you done to validate your approach to understanding or effectively aiding this problem? What evidence do you have that your approach is a good one?

What are your measures to track progress?
